Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-6, 8-11, and 17-23, drawn to a method of designing a humanized immunoglobulin chain, classified in Class 530, subclass 387.

II. Claims 7 and 12-15, drawn to an immunoglobulin comprising two light/heavy chain pairs, classified in Class 530, subclass 387.

III. Claims 16 and 24-28, drawn to a DNA sequence encoding a humanized immunoglobulin chain and a method of recombinantly producing a humanized Ig containing a heavy and light chain, classified in Class 435, subclass 68 and 70 and 172.3.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group III and each of Groups I and II are related as mutually exclusive species in intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful other than to make the final product (MPEP section 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP section 806.04(h)).

In the instant case, the intermediate product is deemed to be useful as a diagnostic probe or as an intermediate in each of the other Groups (either I or II) and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. §103 of the other invention.

Inventions Group I or III and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different products or (2) that the product as claimed can be made by another and materially different process (MPEP 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as either chemical synthesis or design based on that taught by Morrison or Oi.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, and because the searches for the individual Groups are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

A telephone call was made to William M. Smith on October 25, 1989 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).

Any inquiry concerning this communication should be directed to Michelle Marks, Ph.D. whose telephone number is 703-557-0664.
